

Globally, LGC, familiarly known as Laboratory of the Government Chemist, is more than 160 years old organization with over 1000 scientists working in various offices and laboratories located all over U.K., Europe and India, engaged in a wide range of scientific disciplines. LGC is Europe's leading independent analytical laboratory providing advanced and complete chemical and biochemical measurement solutions, custom synthesis of chemical substances and reference standards, DNA diagnostics and genetic screening, proficiency testing, forensics, basic research and product development, method development, consultancy and training.

Quality standards underpin LGC's business, including fulfilling the role of the UK designated national laboratory for chemical and biochemical metrology. LGC produces and provides authentic reference substances, which enables reliable and accurate measurement through its market leading distribution division LGC Promochem. **LGC Promochem-India** is the undisputed leader in this range of products, an achievement made possible by sheer technical expertise, dedicated marketing team backed by very efficient support and distribution network.

Equipped with the latest state-of-the-art instrumentation and ably backed by the highly qualified scientists, LGC is uniquely positioned to meet the analytical and validation needs of the pharmaceutical industry offering a range of complete specialized niche services customized to client specific needs which are provided by the technical centers located across U.K., Europe and India.

In India, with the state-of-the-art Research & Development center established at Bangalore, LGC Promochem is a leading organization engaged in chemical synthesis, analysis, metrology and a science based successful marketing and distribution for the past decade.

LGC Promochem India provides:

- Exclusive Distributors for entire US Pharmacopoeial product range including Reference Substances and Publication.
- Other official Pharmacopoeial Reference Standards, Pharmaceutical Impurity Reference Standards & Working Standards serving the entire Pharmaceutical industry
- Scientific and Technical support services in analytical chemistry and related metrology in pharmacopoeia compendia compliance and related method development.
- Scientific and Technical services in entire range of Separation Science applications including developmental assistance in related chemical metrology.
- Complete range of Prep-Process Chromatography media and scale up solutions.
- Technical support and assistance in life sciences relating to cell and culture application and ATCC products distribution.
- Technical support services in analytical application of NMR and are Exclusive distributor of related solvents and isotopes from Cambridge Isotopes Laboratories Inc.(CIL), USA.
